Introduction

Gross Domestic Product (GDP) represents the total value of goods and services produced in a country.

GDP growth is an important indicator of economic performance.

This project analyzes Pakistan's GDP growth trend and examines factors affecting economic growth.

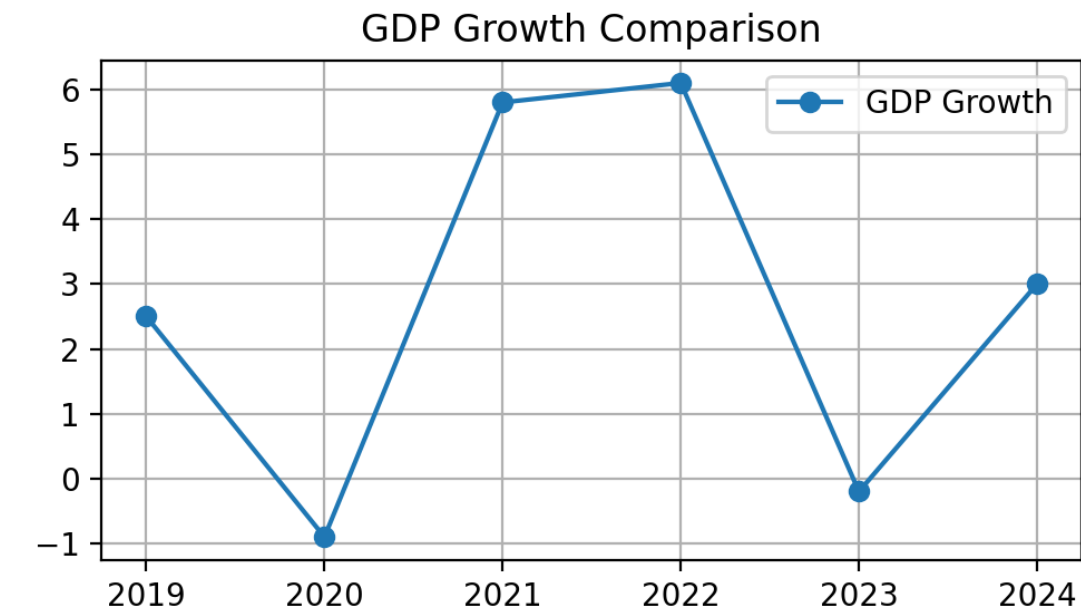

Objectives

- To analyze Pakistan's GDP growth trends.
- To compare economic performance over different years.
- To identify factors affecting economic growth

Data Table

Year	GDP Growth
2019	2.5
2020	-0.9
2021	5.8
2022	6.1
2023	-0.2
2024	3.0

Graph

Simple Diagram

Investment + Consumption + Government Spending + Net Exports → GDP Growth

Conclusion

Pakistan experienced contraction during 2020, recovery in 2021-22, and slower growth afterward.

Economic Analysis

2020 Decline

GDP declined because of:

- COVID-19 effects
- Reduced economic activities
- Lower production

2021-2022 Recovery

Growth improved because of:

- Economic reopening
- Increased industrial activity
- Higher production

2023 Slowdown

Reasons:

- Inflation
- Economic instability
- Lower investment

Findings

- Pakistan's GDP growth has experienced fluctuations.
- External shocks strongly affect economic performance.
- Investment and productivity are necessary for growth.

Conclusion

GDP analysis shows that stable economic policies and investment are required for sustainable economic development.
